

Don Stewart, Vice President of Construction

Your new home deserves the coastal home-building experience and expertise that Don Stewart brings to every project.

Don has more than 20 years of experience in the construction industry designing, building, and renovating high-end custom coastal homes and custom commercial restaurants, business offices, and other unique projects.

He has designed and built over \$200,000,000 in custom homes for satisfied clients throughout Delaware's coastal region, with continued relationships. His combined management experience, technical background, creativity, hands-on building knowledge, and solution-driven approach makes Don an extremely valuable asset to our team and clients.

Don began his career as a college physics and engineering instructor after graduating with a BA in Physics and an AS in Engineering Design. While teaching, he began a small consulting business of prototype design, which eventually led to his calling of designing and building custom homes. That business grew and evolved into a coastal custom home-building firm where he served as a partner and operator for 10+ years. Don then continued to expand his knowledge and skill sets in the custom commercial and high-end residential remodel markets, eventually leading to the management/building of super-high-end custom oceanfront homes ranging from \$5 million to \$16 million.

Don has...

- Worked with some of the most prestigious architects from the DC/Annapolis area
- Built architect-driven homes with the highest levels of finishes
- Built homes with structural complexity that rivals city high-rise buildings
- Built homes designed to withstand the harshest of oceanfront conditions
- Built homes with the most advanced building science applications and materials, continually studying and advancing building science education

A coastal homeowner himself, Don enjoys the beach life with his family, chasing fish, and restoring classic cars.
